

RentEasy – Collaborator Guide

A quick onboarding guide to clone, configure, and run the RentEasy Student Rental Platform locally.

1. Prerequisites

Before starting, ensure you have the following installed on your local system:

- **Node.js**
(v18 or higher recommended)
- **Git**
command-line client

2. Installation & Setup

Step 1: Clone the Repository

Open your shell or terminal and clone the GitHub repository to your local drive:

```
git clone https://github.com/Abhijithraju11/RentEasy.git
cd RentEasy
```

Step 2: Install All Dependencies

Install packages for the root concurrently manager, the backend server, and the frontend client:

```
npm run install-all
```

Step 3: Run the Development Server

Start both backend API server and frontend client concurrently:

```
npm run dev
```

Step 4: Open in Web Browser

Open your browser and navigate to the address Vite prints in the terminal (typically `http://localhost:5173` or `http://localhost:5174` if port 5173 is already in use).

3. Pre-populated Seed Credentials

You do not need to register a new user to test. Use these default accounts to log in instantly:

Student Account:	Email: student@test.com	 	Password: password123
Owner Account:	Email: owner@test.com	 	Password: password123

Note: The backend has been configured to default to Port 5001 to resolve EADDRINUSE conflicts on port 5000.
